

HB 6519

I want to testify that GMO product needs to be labeled. The public should know what they are eating is dangerous to their health. Each person should have the opportunity to learn about how GMO's affect them. If they were aware, they could go on a GMO-free diet for one week. Let their bodies tell them how bad these foods are for them. They will feel the difference and start eating GMO-free all the time. I did it and am so much more healthier for it.
